Version 1.0.0.0 - Initial Version

Version 1.1.0.0 - New Features:
- max apdu added and supported
- BCU-Key support
- converted to .NET 4.6.1, only used by ETS 5.6.5 or higher
- KNX scene can be linked to internal scene (supported by firmware >= 3.1.0)
- Import of backup files of DaliControl Version 1.x (Plugin-Version) is supported and automatically converted into new xml style
- Option added to execute a “post installation” without deleting the short address for ECGs having a long address 0xFFFFFFFF
- New Group icon for Temperature-Control in order to distinguish from RGB

Bug Fixes:
- array out of range problem when ETS minimized the DCA view
- initialize procedure improved when selecting different DCA quickly in ET55
